FGRT 200 FRONT FORK

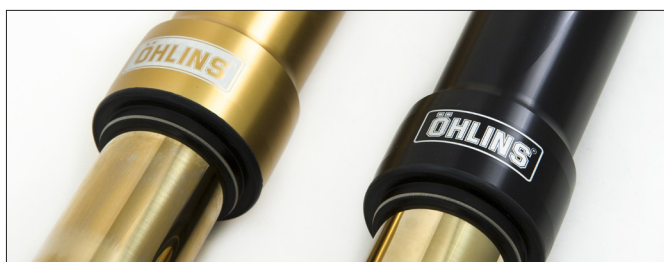

Whether heading for a National Roadracing title or taking your bike for a quiet countryside trip, the Road&Track front fork will deliver loads of performance, consistent behavior and a suppleness you wouldn't believe was possible. Featuring the race proven technology of our NIX 30mm cartridge kit, the compression and rebound damping systems are separated between the fork legs. This not only allows for superior dynamic behavior, but also for keeping the adjusters conveniently on top of each leg.

The front fork improves on rider feedback, brake support and general handling of the bike. Not to mention the exquisite styling – the FGRT 200 is a perfect design in terms of both performance and appearance.

FEATURES

- > Öhlins NIX 30 Cartridge Kit inside
- > Compression damping in one leg, rebound in the other leg
- > Weight and stress optimized fork bottom design
- > All adjustments are made at the top of the fork
- > Reduced weight
- > Already tested in various racing applications with great results
- > Available for all major Hypersport models
