TTX 22 CARTRIDGE KIT

The same technology we equip our Öhlins Front Forks with is available as cartridge kits to be fitted in your bike's standard front forks. We set a development aim for 2018 which we reached by redesigning crucial internal valve parts as well as modifying our shim stack's layouts. With these changes combined, we're happy to offer the rider a fork we experience improved in stability, rigidity, defined position, defined front wheel feedback, settled movement and ability to handle bigger impacts. Of course with our trade marks traction and no harshness untouched.

FEATURES

- > Improved dynamic performance for 2018 year model
- > Compression adjuster, angled for easy of reach
- > Hydraulic stops for great bottoming resistance
- > Top-out springs and rubbers for smooth top out feeling
- > Available for all major MX and Enduro models
