# UNIVERSAL USD FRONT FORK

**PART NO GOLD:** FG 324 • **PART NO BLACK:** FG 424

Öhlins offers a 43 mm upside down fork for any custom builder that wants to give the bike supreme suspension and at the same time get the familiar Öhlins Racing design. Black or gold? It's your choice!

The technology in this fully adjustable fork is proven through the years on numerous applications. Café racers, scramblers, custom art or just a good fork to your standard bike? This fork works for all applications.

The top cap gives the possibility to adjust spring preload as well as rebound adjustment in each leg separately. The external adjuster on the fork bottom clamps is for compression adjustments. The fork bottoms are clean without brake caliper mountings to give the fork leg a clean look for applications with single or dual side brakes. This also enables the fork to be mounted on various models.
